PROFESSIONAL SUMMARY

Flutter developer with professional experience since 2022 building and shipping cross-platform mobile applications for iOS and Android in fintech, healthtech and productivity. Sole architect and developer of Bundlegram, a live fintech payment platform, and lead developer of Medherence, a HIPAA-aligned digital health platform. Both are deployed to the App Store and Google Play. Experienced in clean architecture, BLoC and Riverpod state management, REST API and WebSocket integration, custom animations with CustomPainter, performance profiling, automated testing and CI/CD. Works closely with designers to turn Figma specifications into responsive Flutter interfaces.

WORK EXPERIENCE

Flutter Mobile Architect
Bundlegram (Fintech Payment Platform, Live in Production) | September 2025 – September 2026

- Sole architect and developer: designed the system architecture, implemented BLoC state management across all feature modules, and delivered the app to Google Play and the Apple App Store.
- Integrated third-party REST JSON APIs with JWT token management and refresh token flows and real-time transaction sync over WebSocket for live wallet updates.
- Built interactive financial dashboards and animated transaction feeds using CustomPainter and AnimationController.
- Architected a dual-role system (User and Agent) with modular onboarding, BVN and email verification, KYC and encrypted wallet management.
- Designed and implemented Airtime-to-Cash feature, allows users to convert unused airtime from their network provider to wallet cash. Built full flow from UI to conversion API.
- Implemented service availability logic, checks provider status before conversion, shows clear "Service Unavailable" state instead of silent failure, reducing user confusion and support tickets.
- Built interactive financial dashboards and animated transaction feeds using CustomPainter and AnimationController for smooth UX.
- Profiled widget rebuilds with Flutter DevTools, cut unnecessary rebuilds and improved cold-start performance by ~30%.
- Set up CI/CD pipelines for automated builds, testing and release to both platforms, and prepared full deployment documentation for handover.

Mobile Developer (Flutter), Contract
Tradelenda, Lagos, Nigeria | June 2025 – September 2025

- Implemented UI workflows for loan applications and investment dashboards in a live Flutter fintech app on the App Store and Google Play.
- Integrated a liveness-detection hardware API into KYC onboarding as a background service component to support fraud prevention and identity verification.
- Optimised performance using DevTools profiling, reducing jank on low-end Android devices.

Lead Flutter Developer
Medherence (Digital Health Platform) | January 2025 – June 2025

- Architected the complete Flutter application using Clean Architecture, separating data, domain and presentation layers for modularity and testability.
- Built animated medication timelines, interactive adherence dashboards and custom-painted progress indicators for clinical data visualisation.
- Engineered a background-service reminder engine using Flutter Local Notifications and Alarm Manager for time-critical patient alerts.
- Implemented HIPAA-aligned data handling with encrypted local storage (Flutter Secure Storage), access control and strict clinical data models.

- Integrated crash monitoring and an error logging pipeline, reducing debugging cycles and improving production stability.
- Collaborated with UI/UX designers to translate Figma motion-design specifications into Flutter widget trees.

Mobile Developer
DoWell UX Living Lab | November 2022 – December 2024

- Implemented WebSocket-based real-time signalling for a video and audio call application, managing connection state, reconnection logic and data sync across concurrent users.
- Built a QR scanner with CustomPainter overlay animations and Firebase integration for real-time data processing and storage.
- Automated end-to-end testing pipelines to enforce code quality standards across release cycles.

Mobile Developer
DUKA Nigeria | February 2022 – November 2022

- Integrated the Paystack payment SDK into a marketplace app with secure transaction flows and encrypted session management.
- Used Flutter Secure Storage and Shared Preferences for persistent, encrypted multi-session user data.

FEATURED PROJECTS

Bundlegram: Live Fintech Platform
Flutter, Riverpod, JWT, REST APIs, WebSocket, CustomPainter, CI/CD. Full Clean Architecture delivery with modular features, real-time data sync, animated dashboards, dual-platform deployment and CI/CD handover documentation.

Medherence: Health Data Platform
Flutter, Clean Architecture, Riverpod, Local Notifications. HIPAA-aligned clinical platform with custom-animated UI components, a background reminder engine and encrypted patient data models, deployed to the App Store and Google Play.

Music and Chat Room Application
Flutter, Firebase Firestore, Cloud Functions, WebSocket. Real-time synchronised audio streaming with multi-user sessions, using lazy loading and asset caching for low-latency playback.

Legalzard: License Analyzer
Flutter, BLoC, REST API, Firebase. License comparison tool built on complex API integration, with a post-comparison metrics module and a user feedback loop.

EDUCATION AND TRAINING

B.Sc. Computer Science
University of Ibadan, Nigeria | 2018 – 2025

SKILLS

Core: Flutter, Dart, Flutter SDK (stable and beta channels), Dart isolates, JavaScript, SQL

Architecture and State Management: Clean Architecture, Feature-First, BLoC, Riverpod, Provider, MVVM

Animation and UI: CustomPainter, Canvas API, AnimationController, Rive, Lottie, Hero transitions, Figma collaboration

Integrations: REST JSON APIs, WebSockets, Firebase, GraphQL, background services, Supabase, FlutterFlow

Authentication and Storage: JWT, Firebase Auth, OAuth 2.0, Flutter Secure Storage, Hive, Shared Preferences

Testing and Performance: Unit, widget and integration testing, TDD, automated end-to-end testing, Flutter DevTools profiling, lazy loading, isolate offloading

CI/CD and Deployment: GitHub Actions, Fastlane, Git, Google Play Console, App Store Connect, Vercel
